The high performance, fully integrated long-range airborne laser scanner system RIEGL LMS-Q1560 is a cutting-edge tool for a variety of airborne surveying missions. The dual channel scanner makes use of powerful laser sources, Multiple-Time-Around (MTA) processing, echo digitization and waveform analysis. That allows operation at various flight altitudes and is therefore ideally suited for aerial survey of ultra wide areas as well as of complex urban environments.

Dual LiDAR Channel
Airborne Laser Scanning System

Typical Applications
- Ultra Wide Area / High Altitude Mapping
- Mapping of Complex Urban Environments
- City Modeling
- Glacier & Snowfield Mapping
- Mapping of Lakesides & River Banks
- Agriculture & Forestry
- Corridor Mapping

**RIEGL LMS-Q1560 Technical Data**

- max. operating flight altitude AGL: 4,700 m
- pulse repetition rate PRR (burst): up to 800 kHz
- waveform data output: not intrinsically eye safe

### Technical Specifications

- Side View

### Main Features

- High laser pulse repetition rate up to 800 kHz (burst)
- Unrivaled scan pattern for best point spacing on the ground
- Innovative forward/backward looking capability for collecting data of vertical structures
- Digitization electronics for full waveform data
- Multiple-time-around-processing for resolving range ambiguities automatically
- Straightforward flight planning and increased flight safety
- Integrated inertial navigation system and GNSS receiver
- Fiber coupled high speed data interface to single RIEGL Data Recorder
- Integrated multi-megapixel aerial medium format camera
- Integrated secondary camera (e.g. IR-camera)
